

### **MedVirginia *Solution*<sup>®</sup> Introduces PACS Functionality**

***Solution* users can now view PACS from Bon Secours and Sheltering Arms.**

MedVirginia furthers its commitment to focus on initiatives to improve the quality, safety and efficiency of healthcare services through the innovative use of health information technology.

MedVirginia's development and launch of MedVirginia *Solution*, a community-based Health Information Exchange (HIE), just took a gigantic step toward total integration of the electronic medical record. MedVirginia *Solution* provides a technical infrastructure to collect hospital, physician, lab, and pharmacy data and organize it into one single electronic chart that authorized providers can access from a user-friendly, secure web portal.

MedVirginia *Solution* functionality continues to evolve to provide value-added services for its users, such as electronic results delivery to a provider's electronic medical record; and now, PACS images included in the patient chart, combining data and images for a complete picture of a patient's health.

To learn more about MedVirginia *Solution* or the exciting new functionality of PACS, contact:
